Selection Guide and Junction Code Table

## Company Profile

APT has been established in 1993. Today it is now a Chinese leading manufacturer of low-voltage components and has been specialized in the manufacturing of low voltage products such as pushbuttons, indicators, cam switches and general-purpose relays. In August 2008, Siemens Electrical Apparatus Ltd. Suzhou (hereinafter referred to as "Siemens") made the wholly-owned acquisition of APT, putting the APT brand and related products under the operation of Siemens. With unified quality control and R&D resources of Siemens, APT focuses on manufacturing pushbuttons, indicators and other important low-voltage products such as tower lights, control cabinets, combined lights, current transformers and limit switches etc.

Through over 20 years of promotion and application, the APT products have been widely serving dozens of industrial fields in China including power, energy, rail transit, elevator, logistics, machine tool, etc. They have been successively selected and applied in Qinshan Nuclear Power Plant, the Three Gorges Project, Shenzhou V Spacecraft, Qinghai-Tibet Railway locomotives, "Harmony" Electric Multiple Unit, "Fuxing" Electric Multiple Unit, international airports and urban metros and have become the preferred brand for national key projects. At the same time, Siemens gives full play to its international operation experience to continuously enhance the management and business development of APT and better serve the Chinese market through advanced technology and improved product line.

## ◎ Use instruction

- “LW39 Selection Guide” provides the contents and basic methods for LW39 selection.
- The complete order codes of LW39 cam switch include functional order code, code of positioning feature, junction code and some other necessary auxiliary codes. For some cam switches for special purposes, partial or all codes in the order code are given, so that the user may only supplement other contents.
- Examples of cam switches for special purposes:

Function	Order code	Panel symbol	Junction table																					
Direct startup, disconnected during the operation	LW39-63-Q15/2 LW39-25-Q5.5/2 LW39-16A-Q3/2 LW39-16B-Q3/2		<table border="1"> <thead> <tr> <th>Panel symbol</th><th>OFF</th><th>ON</th></tr> <tr> <th>Position angle</th><th>0°</th><th>45°</th></tr> </thead> <tbody> <tr> <td>A — 1-2</td><td></td><td>x</td></tr> <tr> <td>B — 3-4</td><td></td><td>x</td></tr> <tr> <td>C — 5-6</td><td></td><td>x</td></tr> <tr> <td></td><td></td><td></td></tr> <tr> <td></td><td></td><td></td></tr> </tbody> </table>	Panel symbol	OFF	ON	Position angle	0°	45°	A — 1-2		x	B — 3-4		x	C — 5-6		x						
Panel symbol	OFF	ON																						
Position angle	0°	45°																						
A — 1-2		x																						
B — 3-4		x																						
C — 5-6		x																						

- The junction code table is formed by summarizing users' applications of LW39 for over ten years, provides the junction table of cam switch under most applications and adopts specific code marking. Based on this table, the user can find out the required junction code to make the order code complete
- This new junction code table is from the revision to the “Junction Table of LW39 Cam Switch” (2016) for replacing it. Such revision is to adapt to the increasingly rich functions of LW39
- The new junction code table and the old junction table are used in different ways, as shown below:

Type B cam switch determined as 16A

- Checked in the old junction table

- Checked in the new junction table:LW39-16B-60B-02/1

(1) (2)

LW39 - 16B - 60B - 02/1		
Operation gear	0	1
Positioning angle	-30°	30°
1-2		x
3-4		x

 ①	②	
	Junction code	02/1
	2-16 codes	0/3
	Operation gear	1      2
1-2		x
3-4		x

60B indicates that the positioning angle is -30° and +30°

- Compared with the old junction table, the new junction code table has no restrictions on an operating angle, functional order code etc.. Thus it can provide more flexibility for users and meet their various use demands to the largest extent.

## ◎ LW39 selection example

No.	LW39 — <u>16B</u> — <u>6KC</u> — <u>202/2</u> <u>Bk B55</u>			
1	Functional order code	16B indicates type B 16A cam switch For the selection of functional code, please refer to the sample of LW39 cam switch		
2	Code of positioning feature	6KC indicates that the operation gear angle is -60°, 0° and 60° For the determination of the code of positioning feature, please refer to the “positioning ring graph” and “momentary code table” on P4-5		
3	Junction code	For the determination of the junction code, please refer to the “order codes of common cam switches” and “junction code table” on P6-89 or complete the blank junction schedule with our assistance to determine Description of the connect-before-break function: add L behind the junction; the delay angle of LW39-16A, LW39-16N and LW39-25 is about 45° and that of LW39-16B and LW39-16C is about 60°, that is to say, delay above angles on both sides of each conduction junction.		
4	Auxiliary code	Bk is the handle code, B55 is the panel lettering code For code determination, please refer to the sample of LW39 cam switch		

## ◎ Positioning ring graph and use instruction

Note	Positioning angle	Applicable order code	Positioning ring graph	Code example
The code of positioning feature indicates the gear features of the cam switches, including two categories – positioning type and momentary type.	30°	LW39-10 LW39-16 LW39-25 LW39-63	 A circular diagram showing 12 positions labeled K through T clockwise from the top. The positions are grouped into three sets of four, corresponding to 30° increments.	“3KC” indicates 30° positioned, starting from position K and ending at position C clockwise. It has 5 positions - K, O, A, B, C.
Positioning type	45°	LW39-10 LW39-16 LW39-25 LW39-63	 A circular diagram showing 8 positions labeled O through T clockwise from the top. The positions are grouped into two sets of four, corresponding to 45° increments.	“4OB” indicates 45° positioned, starting from position O and ending at position B clockwise. It has 3 positions - O, A, B.
	60°	LW39-10 LW39-16B LW39-16C LW39-63	 A circular diagram showing 6 positions labeled K through T clockwise from the top. The positions are grouped into one set of six, corresponding to 60° increments.	“6KE” indicates 60° positioned, starting from position K and ending at position E clockwise. It has 4 positions - K, A, C, E.
	90°	LW39-10 LW39-16 LW39-25 LW39-63	 A circular diagram showing 4 positions labeled G through T clockwise from the top. The positions are grouped into one set of four, corresponding to 90° increments.	“9GC” indicates 90° positioned, starting from position G and ending at position C clockwise. It has 3 positions - G, A, C.

Code description

Note: in case of 360° operation and no limits, the ending position and starting position has the same letter, for example, “3JJ” indicates 30° positioned, starting from -90°, 12 gears, no limits.

## Spring return type code table

- One or more gears of spring return type have spring return function. LW39 series cam switches have provided tens of momentary ways for option to the users and can satisfy their special demands.
- The following table lists the commonly used momentary functions and the codes of their positioning features. Please pay attention to their applicable order codes.

Note: "Y" indicates that the code can be produced     "Y\*" indicates that the code can be produced, but no more than 3 pitches     Blank indicates that the code cannot be produced.

If there is any further request, please consult the Technical Support Department.
